

API Contract Amendment v1.1

Insights Server-Side Aggregation

From: POS Frontend Team → Backend Team

Date: 2026-06-15

Ref: Original contract v1.0 (2026-06-12)

Validated on: cafe103 (rid=644) + Palm House (rid=541), May 2026 full month

FE does ZERO aggregation. ZERO reconciliation. Every number on screen comes directly from the API.

Same metric name across endpoints = same number. Different metric = different field name.

BACKEND BUGS

4

CONTRACT AMENDMENTS

Backend Bugs

B-1 **Cancel EP** `order_scope.order_count` — **Wrong Date Attribution**

Contract §3.4 says: *"Date attribution: cancel_at"*. Cancel EP uses `created_at` for `order_count` + `by_day` , but correctly uses `cancel_at` for `by_employee` . Internal inconsistency.

FIELD	VALUE	ATTRIBUTION	CORRECT?
<code>summary.order_scope.order_count</code>	72	<code>created_at</code>	✗
<code>summary.order_scope.qty</code>	157	<code>cancel_at</code>	✓
<code>by_day SUM(order_cancel_count)</code>	72	<code>created_at</code>	✗
<code>by_employee SUM(order_cancels)</code>	157	<code>cancel_at</code>	✓

Dashboard EP order_scope_count

157

cancel_at

✓

Fix Required

Cancel EP (insights-cancellations):

summary.order_scope.order_count → use cancel_at attribution
Currently: 72 (created_at). Should be: 157 (cancel_at).

by_day[].order_cancel_count → use cancel_at for business-day bucketing
Currently: SUM = 72. Should be: SUM = 157.

Verify: order_count = SUM(by_day) = SUM(by_employee) = Dashboard EP count

B-2 Tax Not Zeroed on Cancelled Lines (ESC-3)

Palm House May: Dashboard cancel loss = £84,291 vs Items cancel loss = £85,049. $\Delta = ₹757$ = tax still present on cancelled item lines.

Business rule (owner-frozen 2026-06-02): *"If order is cancelled, tax, discount, service charge, delivery charge — all must be reverted."*

Already escalated as ESC-3. No contract change. Both formulas converge once backend zeros financial fields on cancellation.

Contract Amendments

A-1 TAB Settlement Needs Timestamp for Hourly SMALL

Problem: Revenue includes TAB settlements, but settlements have no timestamp → `by_hour` can't include them.

METRIC	PALM HOUSE MAY
revenue.total	₹14,09,418

SUM(by_hour.amount)	₹14,08,998
Gap	₹420 = tab_settlement_total

Contract Change

```
§3.1 revenue object – ADD:

"tab_settlements": [
  { "timestamp": "2026-05-15T14:30:00", "amount": 420.00 }
]

Rules:
by_hour MUST include TAB settlement amounts (use settlement timestamp hour)
SUM(by_hour.amount) = revenue.total ← ALWAYS
SUM(channel_mix.revenue) + tab_settlement = revenue.total ← ALWAYS
channel_mix does NOT include TAB (not order-based – FE shows footnote)
```

A-3

daily.tax

Scope — Must Match

daily.revenue

SMALL

Problem: Summary `total_tax` includes TAB (per H5), but `daily.tax` is non-TAB. They don't sum.

METRIC	PALM HOUSE MAY
SUM(daily.tax)	₹55,558
summary.total_tax	₹57,426
Gap	₹1,868 = TAB order tax

Contract Change

```
§3.2 – REPLACE tax rule:

total_tax = non-TAB fs=6 orders only (matches daily.revenue scope)
total_gst = non-TAB fs=6 only
total_vat = non-TAB fs=6 only
tab_tax_total = TAB fs=6 orders only ← NEW FIELD
```

Guarantees:

SUM(daily.tax) = summary.total_tax ← ALWAYS

Full tax = total_tax + tab_tax_total

A-4

Discount Scope Alignment

SMALL

Problem: Three different "discount" numbers across endpoints. User sees different values on each screen.

ENDPOINT	FIELD	SCOPE	PALM HOUSE MAY
Dashboard §3.1	manual_discount	All fs=6 (incl TAB)	₹51,892
Sales §3.2	total_discount	Non-TAB fs=6	₹46,592
Items §3.3	SUM(sold.discount)	Sold bucket (line-level)	₹49,852

Contract Change

§3.1 Dashboard discounts – CHANGE scope:

manual_discount = non-TAB fs=6 (was: all fs=6)

tab_discount_total = TAB fs=6 ← NEW FIELD

Guarantees:

Dashboard.manual_discount + coupon = Sales.total_discount ← ALWAYS

Items.sold.discount stays line-level (different metric, expected to differ)

A-6

daily.discount

Scope — Explicit Non-TAB

SMALL

Problem: Same pattern as A-3. daily.discount scope not defined in v1.0.

Contract Change

§3.2 daily[] – ALL fields use same scope: non-TAB fs=6 orders

```
{
  "date":      "2026-05-01",
  "revenue":   non-TAB fs=6 (unchanged),
  "orders":    non-TAB fs=6 (unchanged),
  "tax":       non-TAB fs=6 (per A-3 – now explicit),
  "discount":  non-TAB fs=6 (NOW EXPLICIT),
  "tab_settlement": from daily-sales-revenue-report (unchanged)
}
```

Guarantee:
SUM(daily.discount) = summary.total_discount ← ALWAYS

Validation Evidence

CHECK	CAFE103	PALM HOUSE
Revenue: Dashboard = Sales	✓ ₹23,05,959	✓ ₹14,09,418
Orders: Dashboard = Sales	✓ 2,062	✓ 1,690
Payment total = Revenue	✓	✓
Channel + TAB = Revenue	✓ Δ=₹2,458 (TAB)	✓ Δ=₹420 (TAB)
Daily SUM = Summary (rev + orders)	✓	✓
Items meta = SUM(items[])	✓ all 9 fields	✓ all 9 fields
Cancel loss: Dashboard = Cancel EP	✓	✓
Cancel count: Dashboard = Cancel EP	✗ B-1 bug	✗ B-1 bug
Cancel loss: Dashboard = Items	✓	✗ B-2 Δ₹757

After v1.1 — All Guarantees

SUM(by_hour.amount)

= revenue.total

← A-1

SUM(channel_mix.revenue)

= revenue.total - tab_settlement

← A-1

SUM(daily.revenue)

= summary.total_revenue

← already true

SUM(daily.orders)

= summary.total_orders

← already true

SUM(daily.tax)

= summary.total_tax

← A-3

SUM(daily.discount)

= summary.total_discount

← A-6

Dashboard.manual_discount

= Sales.total_discount (non-TAB)

← A-4

Cancel EP.order_count

= Dashboard.order_scope_count

← B-1

Items cancel loss

= Dashboard cancel loss

← B-2 (ESC-3)

Action Summary

#	TYPE	WHAT	EFFORT	OWNER
B-1	BUG	Cancel EP order_count uses created_at not cancel_at	SMALL	Backend
B-2	BUG	Tax not zeroed on cancellation (ESC-3)	MEDIUM	Backend
A-1	AMEND	TAB settlement with timestamp for hourly	SMALL	Contract + Backend
A-3	AMEND	total_tax = non-TAB + add tab_tax_total	SMALL	Contract + Backend
A-4	AMEND	Dashboard discount = non-TAB + add tab_discount_total	SMALL	Contract + Backend
A-6	AMEND	daily.discount scope explicit non-TAB	SMALL	Contract + Backend

Amendment v1.1 — 2026-06-15 — Validated on cafe103 + Palm House, May 2026

"Same name, same number. Different metric, different name."
